How to Determine Vehicle Side

The *driver side* of the vehicle is identified as the "**Left Hand (LH)**"

The *passenger side* of the vehicle is identified as the "**Right Hand (RH)**"

How do drivers determine which side of the vehicle is which? It's as easy as sitting inside the vehicle. While sitting in the driver's seat, the right side of the vehicle is to the driver's right, effectively the passenger's side. The side a driver is sitting in is the left side of the vehicle. So, when looking online for car parts, keep this in mind as you select the parts.

Also remember to keep in mind the front and back of a vehicle. This comes into play primarily when dealing with wheel parts, including struts and shocks, and headlights and tail lights. This designation also becomes useful when determining what fender is needed when replacing a damaged or old one.
